

GSGS MISCELLANEOUS MAPS – AN INTRODUCTION.

The two “poor relations” in any studies of the suite of products produced by the Geographical Section of the General Staff are GSGS Office Reference maps and GSGS Miscellaneous maps.

Office Reference Maps (OR Maps).

The most familiar manifestation of the OR map is of course the modern map catalogue index map but this is a specialist use of the OR designation. OR maps existed in their own right prior to the adoption of the OR designation for indexes. The OR designation was generally applied to small-format simple outline sketch maps, often monochrome used for a multitude of purposes. They are not without interest however. One use that comes to mind was that of the 3 or four annotated Office Reference maps used to illustrate the stages of the retreat from the Thai border down through the Malay peninsula and onto the island of Singapore in 1942 that were produced presumably for high level briefing purposes.

Miscellaneous Maps (Misc Maps).

The Misc map is a relatively modern phenomenon, seemingly having been born of the second world war, but its gestation may have been much earlier. The use of non-topographic sketch maps for miscellaneous purposes can be traced back to the early days of numbered War Office maps. The more one looks at the products listed in Crispin Jewitt’s “Maps for Empire – The First 2000 Numbered War Office Maps”, the more one is struck by how few really topographic map series it contains. Of those that are topographic maps, many are medium to small scale compilations, few are original surveyed topographic series and of those, few are of any great geographical extent. So it can be suggested that had many of the maps listed in Jewitt been produced in recent times they might have been given OR or Misc designators.

The earliest sheets in the numerical sequence of GSGS Misc maps date from 1943. Unlike the OR map, Misc maps of that period were often large or very large format products and were often multicoloured. These maps are of interest because they were often produced in support of imminent operations or for the planning of future operations. Many were produced under the auspices of the Inter-Service Topographical Department and bear an appropriate production notes, typically : -

“Compiled and drawn by Inter-Service Topographical Department.”

“Produced under the Superintendence of Vice-Admiral Sir John Edgell, K.B.E., C.B., Hydrographer.”

Many were produced for inclusion in intelligence reports or planning dossiers so it is common to find both plain stock maps and a later overprinted variant bearing intelligence document references.

The family of GSGS Misc-designated maps reflects many of the operations of WW2. The earliest numbered maps appeared in support of the allied landings in Sicily and Italy in 1943.

A particularly interesting batch is that covering the coastline of France also produced from 1943. It is clear from these that, prior to the detailed Operation Overlord planning, the whole coastline of France was subjected to terrain analysis with regard to beach landings and beach exits. Incidentally, these escaped mention in the joint Defence Surveyors’ Association and British Cartographic Society’s seminar on D-Day mapping in 2004. Naturally, in addition to France, Germany features prominently in early Misc-designated maps. Perhaps surprisingly there are many products covering Norway and this perhaps represents forward planning for the liberation of Norway once the invasion of Europe was in full swing. Maps in support of the planning for the re-conquest of Malaya, Singapore, Borneo and Hong Kong also feature quite heavily.

About 260 numbers were allocated during and immediately after but relating to the world war. Thereafter, the Misc designation was used for a variety of purposes. Occasionally the Misc designation was used for operational topographic maps, maps of Aden during the 1960’s come to mind. However one of the main uses was for peace-time exercise maps and Staff College and promotion examination papers, the first such map for this purpose being numbered 289.

The list forming the main body of this document represents a first attempt to record as far as possible all the World War 2 GSGS Misc designated maps. Additionally, some other GSGS Misc maps of the post-war period that have been seen in passing have been included.

The following list is a simple analysis, or breakdown of World War 2 GSGS Misc-designated maps, into the countries covered by the mapping of those sheets so far found.

GEOGRAPHICAL AREA.	GSGS MISC NUMBERS.
ALBANIA	See Yugoslavia.
ANTARCTIC	104.

NORWAY	41?, 49, 51, 56, 58-59, 64, 73, 98-99, 102, 109, 112, 115, 116, 122, 137, 141-143, 158, 160, 164-165, 169, 175-176, 178-183, 187, 190-191, 199-200, 206, 219, 226, 233-234, 236, 246.
SARDINIA	48, 62, 242.
SINGAPORE	See Malaya.
SICILY	17, 22-24, 30, 140.
THAILAND	166, 252, 256.
TUNISIA	240.
UNIDENTIFIED	235, 258, 259.
YUGOSLAVIA/ALBANIA	47, 57, 83-86, 90, 101, 119, 127, 131, 145-146, 174, 254, 261.

It should be noted that many of the above designations are of single sheet series. However, many are multiple sheet series. For instance there are about 24 "town plans" or similar maps of Borneo with the number GSGS Misc 203.

The Miscellaneous designator was of course used in other theatres in World War 2 and after. The following list, not guaranteed to be error free, has been condensed from "Webster". (Cataloguers' Notes No. 36, Military Publishers' Designations) : -
